## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4-6 stand rejected under 35 U.S.C. 102(b) as being obvious over US Patent #6,128,877 to GOODMAN et al. GOODMAN et al. discloses the use of a modular wall panel including a generally rectangular frame (2) having a lower channel member (12), a base rail (44), at least two glide assemblies (GA) (see marked-up attachment), apertures (unlabeled) because column 9, lines 33-34 and column 13, lines 45-46 disclose that the frame (2) is comprised of member (12), thus it would have been obvious to one having ordinary skill in the art at the time the invention was made that the member 12 would also have apertures to receive the screw (37), see Figure 10. Further, GOODMAN discloses the basic claimed modular panel except for the step of inserting a rotary tool is a method step which is not germane to the issue of patentability of the modular wall panel itself. Therefore, this limitation has not been patentable weight in this apparatus claim.

Art Unit: 3635

In regards to claims 5 and 6, the modular wall system of GOODMAN et al. further includes a decorative panel (30) and a base panel (81).

Claim 7 is rejected under 35 U.S.C. 102(b) as being obvious over US Patent #6,128,877 to GOODMAN et al. In view of US Patent #5,381,994 to WELCH. GOODMAN et al. discloses the basic claimed structure except for explicitly stating that his adjustment member is threaded. Figures 2 and 18 of GOODMAN et al. Appear to show threads on the adjustment member (37). However, WELCH explicitly teaches the use of threads, column 3, line 10, on his threaded member (60) and a sleeve (SL) for receiving the threaded member, see the marked attachment. Thus, it would have been obvious to one having ordinary skill in the art to thread the adjustment member of GOODMAN et al. and to provide the assembly with a sleeve in order to securely receive and maintain the threaded member in position.

***Response to Arguments***

Applicant's arguments are moot in view of the modified rejections as set forth above.

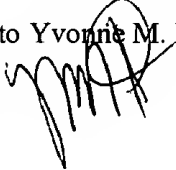

***Allowable Subject Matter***

Claims 1-3 remain as being allowed.

Claim 8 is allowed.
